Election/Restrictions

Applicant's election without traverse of Group I, Species B, Claims 1-2, 4-5, 7, 9, 11 and 13-14 in the reply filed on 9-22-2008 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2, 4-5, 7, 9, 11 and 13-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As disclosed in the parent applications, it is critical that the non-fat, milk solids (MSNF) of the intermediate condensed skim milk was 35-36.5%. The claims are silent in this regard as is, apparently, the specification. Clarification and/or correction is requested. Also, with the filing of the Declaration of Howard on October 24, 2003, in application 10/254,118, which clearly emphasizes not only the criticality of the stabilizer but its concentration which stabilizer is presumably the only one disclosed in the specification, i.e., sodium hexametaphosphate and carrageenan, then it would appear that the claims are non-enabling without the recitation of the critical stabilizer. That is, the Declaration filed October 24, 2003, purports to show that either type of steam

treatment, injection or infusion, will not yield the properties desired in the milk without the specific stabilizer presumably disclosed. Although the Declaration states that steam injection works better than steam infusion, it still is lacking without the specific stabilizer formulation. Applicants are invited to submit any court decisions they are aware of which state it is enabling to recite only a generic agent (e.g., in this case a stabilizer) with its attributed properties when the record emphasizes the criticality of a particular agent and its

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-2, 4, 5, 7, 9, 11 and 13-14 are rejected on the ground of nonstatutory double patenting over claims 35-61 of U. S. Patent No. 6,887,505 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: Claims 35-61 of the patent recite the features of a method producing an UHT milk concentrate product while the instant application recites a method of dispensing the same product using similar method steps.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
